Please find below and/or attached an Office communication concerning this application or proceeding.

	Application No.	Applicant(s)				
	09/777,002	MOULTON ET AL.				
Office Action Summary	Examiner	Art Unit				
	Hassan Phillips	2151				
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status						
1) Responsive to communication(s) filed on <u>13 January 2005</u> .						
2a) This action is <b>FINAL</b> . 2b) This action is non-final.						
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is						
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.						
Disposition of Claims						
4)⊠ Claim(s) <u>1-7 and 12-31</u> is/are pending in the application.						
4a) Of the above claim(s) 31 is/are withdrawn from consideration.						
5) Claim(s) is/are allowed.						
6)⊠ Claim(s) <u>1-7 and 12-30</u> is/are rejected.						
7) Claim(s) is/are objected to.						
8)☐ Claim(s) are subject to restriction and/o	r election requirement.					
Application Papers						
9) The specification is objected to by the Examiner.						
10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner.						
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).						
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).						
11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.						
Priority under 35 U.S.C. § 119						
12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).						
a) ☐ All b) ☐ Some * c) ☐ None of:						
1. Certified copies of the priority documents have been received.						
2. Certified copies of the priority documents have been received in Application No						
3. Copies of the certified copies of the priority documents have been received in this National Stage						
application from the International Bureau (PCT Rule 17.2(a)).  * See the attached detailed Office action for a list of the certified copies not received.						
dee the attached detailed Office action for a list of the certified copies not received.

#### **DETAILED ACTION**

This action is in response to amendments and remarks received on January
 2005.

# Claim Rejections - 35 USC § 112

2. In consideration of the amendments made to claim 15 to correct antecedent basis issues, the Examiner has withdrawn the rejection of claim 15 under 35 USC 112, second paragraph.

## Response to Arguments

3. Applicant's arguments filed January 13, 2005, have been fully considered but they are not persuasive. Applicant argues that Carter does not teach the data storage processes serving a data storage request based at least in part upon the particular contexts associated with each of the storage nodes. Applicant also argues that the Examiner's conclusion of obviousness is based on impermissible hindsight reconstruction of the claimed invention. The Examiner respectfully disagrees.

The teachings of Carter clearly suggest that data storage processes serve a data storage request based at least in part upon the particular contexts associated with each of the storage nodes, (col. 6, lines 10-17). In the teachings of Carter, the data storage processes associate the particular contexts with a globally unique identifier. The data storage processes use the globally unique identifier to access a particular node that will

serve the data storage request based at least in part upon the particular context associated with each storage node, (col. 6, lines 10-17 and col. 7, lines 43-49).

In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See In re McLaughlin, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971). In this case, although Carter does not show storage nodes having associated contexts including a political context, an economic context, a geographic context, or a network topological context, it would have been obvious to one of ordinary skill in the art at the time of the present invention that a user of the system disclosed by Carter, in the field of politics, economics, geography, or network topology would wish to store data associated with politics, economics, geography, or network topology. Thus, it would have been obvious to one of ordinary skill in the art to modify the teachings of Carter to show the data storage processes associating a political context, an economic context, a geographic context, or a network topological context with a globally unique identifier, and having the data storage processes use the globally unique identifier to access a particular node that will serve the data storage request.

Accordingly, the references supplied by the examiner in the previous office action covers the claimed limitations. The rejections are thus sustained. Applicant is requested to review the prior art of record for further consideration.

Page 4

# Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-7, 13-30, are rejected under 35 U.S.C. 103(a) as being unpatentable over Carter et al. (hereinafter Carter), U.S. patent 5,987,506.
  - 6. In considering claim 1, Carter discloses a data storage system comprising:
    - a) A plurality of storage nodes, each node existing at a physical location and having one or more associated contexts, (col. 6, lines 7-12);
    - b) Interface mechanisms coupled to each storage node for communicating storage access requests with the storage node, and data storage management processes that select one or more of the storage nodes to

Application/Control Number: 09/777,002

Art Unit: 2151

serve a data storage request based at least in part upon the particular contexts associated with each of the storage nodes, (col. 7, lines 43-49).

Although the disclosed system of Carter shows substantial features of the claimed invention it fails to expressly disclose: The context including political, economic, geographic, or topological context.

Nevertheless, having the context include political, economic, geographic, or topological context is a field of use limitation, and not patentable distinction.

Thus, it would have been obvious to one of ordinary skill in the art associated with a political field to modify the teachings of Carter to show the context include political context. Similarly, it would have been obvious to one of ordinary skill in the art associated with economic, geographic, or topological fields, to modify the teachings of Carter to show the context including economic, geographic, or topological contexts. This would have shown how the teachings of Carter could be used in the respective fields.

- 7. In considering claim 2, the disclosed system of Carter further teaches the data storage management processes comprising computer-implemented processes executing in at least one of the storage nodes. See col. 6, lines 52-58.
- 8. In considering claim 3, the disclosed system of Carter teaches the data storage management processes comprising computer-implemented processes executing in all of the storage nodes. See col. 6, lines 52-58.

Application/Control Number: 09/777,002

Art Unit: 2151

Page 6

9. In considering claim 4, it is implicit in the system taught by Carter that the data storage requests are associated with a set of desired criteria. See col. 6, lines 7-14.

10. In considering claim 5, it is implicit in the system taught by Carter that the data storage requests are associated with a set of desired criteria and the data storage management processes comprise processes for matching the desired criteria to the contexts of the storage nodes. See col. 6, lines 7-14.

- 11. In considering claim 6, the disclosed system of Carter provides a means for the data storage management processes to present a unitary logical volume of data storage to external devices generating the storage access requests to the selected one or more storage nodes. See col. 7, lines 61-64.
- 12. In considering claim 7, the disclosed system of Carter further provides a means for selecting one or more storage nodes such that the contexts associated with the unitary logical volume satisfies the desired criteria associated with the one or more storage nodes. See col. 7, lines 64-67.

13. In considering claim 13, the system disclosed by Carter further comprises authentication mechanisms coupled to the interface mechanisms for authenticating storage nodes before communicating storage requests. See col. 41, lines 1-6.

14. In considering claim 14, Carter discloses a method of managing distributed data storage comprising the acts of:

- a) Providing a plurality of distributed storage nodes, (col. 6, lines 37-43);
- b) Receiving a data storage task in one of the storage nodes, (col. 6, lines 10-12);
- c) Determining desired criteria associated with the data storage task, selecting one or more of the plurality of storage nodes having an associated context satisfying the desired criteria, and executing the storage task in the selected storage node, (col. 6, lines 12-17).

Although the disclosed system of Carter shows substantial features of the claimed invention it fails to expressly disclose: The context including political, economic, geographic, or topological context.

Nevertheless, having the context include political, economic, geographic, or topological context is a field of use limitation, and not patentable distinction.

Thus, it would have been obvious to one of ordinary skill in the art associated with a political field to modify the teachings of Carter to show the context include political context. Similarly, it would have been obvious to one of ordinary skill in the art associated with economic, geographic, or topological fields, to modify the teachings of

Application/Control Number: 09/777,002

Carter to show the context including economic, geographic, or topological contexts.

This would have shown how the teachings of Carter could be used in the respective

fields.

15. In considering claim 15, the disclosed method of Carter further teaches at

least two storage nodes collectively satisfying desired criteria. See col. 7, lines 8-38.

16. In considering claim 16, the disclosed method of Carter further teaches at

least two storage nodes located in different geographical locations. See col. 3, lines 1-

5.

17. In considering claim 17, the disclosed method of Carter provides a means for

the selected nodes to comprise at least two storage nodes in different areas of a single

data center. See col. 3, lines 1-5.

18. In considering claim 18, the disclosed method of Carter provides a means for

the selected nodes to comprise at least two storage nodes in different areas of a single

data center, and connected via different network backbones. See col. 3, lines 1-5.

19. In considering claim 19, the disclosed method of Carter provides a means for

the selected nodes to comprise at least two storage nodes in different data centers.

See col. 3, lines 1-5.

20. In considering claim 20, the disclosed method of Carter provides a means for the selected nodes to comprise at least two storage nodes in different cities. See col. 3, lines 1-5.

- 21. In considering claim 21, the disclosed method of Carter provides a means for the selected nodes to comprise at least two storage nodes in different political jurisdictions. See col. 3, lines 1-5.
- 22. In considering claim 22, the disclosed method of Carter provides a means for the selection to be based upon socio-economic attributes of the physical location of the data storage node. See col. 6, lines 12-14.
- 23. In considering claim 23, it is implicit in the method disclosed by Carter that the step of selecting comprises matching the desired criteria to a context associated with a storage node. See col. 6, lines 12-17.
- 24. In considering claim 24, the disclosed method of Carter further teaches storing data according to a distributed parity scheme analogous to parity distribution found in RAID subsystems. See col. 23, lines 12-27.

25. In considering claim 25, it is implicit that the method of Carter provides a means for the parity paradigm to comprise an N-dimensional parity mechanism where "N" is greater than three. See Carter, col. 8, lines 39-50.

Page 10

26. In considering claim 26, the disclosed method of Carter provides a means for storing data in a manner such that the data stored in any one storage node cannot be used in any meaningful fashion without the availability of some or all of the data stored in other storage nodes. See Carter, col. 7, lines 8-38.

- 27. In considering claim 27, Carter discloses a data storage service comprising:
  - a) Receiving data storage requests and allocating capacity within networkaccessible storage devices to handle the received request, (col. 12, lines 40-43);
  - b) Maintaining a state information data structure including state information describing the contexts of the network-accessible storage devices, (col. 13, lines 19-58).

Although the disclosed system of Carter shows substantial features of the claimed invention it fails to expressly disclose: The context including political, economic, geographic, or topological context.

Nevertheless, having the context include political, economic, geographic, or topological context is a field of use limitation, and not patentable distinction.

Thus, it would have been obvious to one of ordinary skill in the art associated with a political field to modify the teachings of Carter to show the context include political context. Similarly, it would have been obvious to one of ordinary skill in the art associated with economic, geographic, or topological fields, to modify the teachings of Carter to show the context including economic, geographic, or topological contexts. This would have shown how the teachings of Carter could be used in the respective fields.

28. In considering claim 28, the disclosed service taught by Carter further comprises detecting a change in the state information associated with at least one network-accessible storage device, and updating the state information associated with the at least one network-accessible storage device to include the change in state information. See col. 13, lines 36-58.

29. In considering claim 29, the disclosed service taught by Carter further comprises dynamically re-allocating capacity within the network-accessible storage devices in response to detecting a change in their associated contexts. See col. 12, lines 22-28.

30. In considering claim 30, the disclosed service taught by Carter teaches dynamic re-allocation in the absence of externally generated data storage access requests. See col. 12, lines 22-28.

Application/Control Number: 09/777,002 Page 12

Art Unit: 2151

31. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Carter in view of McClain, U.S. patent 5,794,254 (supplied by applicant).

- 32. In considering claim 12, the disclosed method of Carter further teaches:
  - a) Security mechanisms when communicating, (col. 4, lines 38-50).

Although the disclosed system of Carter shows substantial features of the claimed invention, it fails to expressly disclose:

a) Encrypting storage messages before communicating.

Nevertheless, encrypting messages before communicating was well known in the art at the time of the present invention. This is exemplified in a similar field of endeavor where McClain discloses a method and system for backing up computer files at a remote site comprising:

a) Encrypting a storage message before communicating, (col. 6, lines 48-53).

Given the teachings of McClain it would have been apparent to one of ordinary skill to modify the teachings of Carter to show encrypting storage messages before communicating. This would have provided a secure and safe means for storing data over a network, while preventing the data from being read by unauthorized individuals.

### Conclusion

33.**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Application/Control Number: 09/777,002

Art Unit: 2151

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hassan Phillips whose telephone number is (571) 272-3940. The examiner can normally be reached on M-F 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Zarni Maung can be reached on (571) 272-3939. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
